PRODUCT DATA ELECTRONIC CONTROL OPTIONS AND FIA COMPONENTS

FILE: PDS 246.0.3

These electronic pilot options are available for Model 246 Gas-Fired Boiler application. FIA does not approve a specific device or unit. Approval applies to the complete installation based upon the local FIA engineer's evaluation of equipment, hazards of building usage, and the insurance liabilities involved.

FIA generally recommends that gas-fired sectional boilers be equipped with electronically supervised pilots, low-water cutoffs (water boilers included), operating controllers separate from limit controls, also such special gas valving and accessory trim as is covered in the Group C listing. To match FIA recommendations, order the Group A, Manual Ignition Electronic Control Package, and Group C, Valves and Accessories, in combination with the standard 246 Boiler 100% shut-off trim, either D5 (natural gas) or D2 (propane gas).

These options are A.G.A. certified for use with the Model 246 Boiler.

Group A: Manual Pilot Ignition—for Natural or Propane Gas

1. H-RA890F electronic relay and Q270A base
2. H-Q179B electronic pilot
3. High-temperature flame rod wire for use in the high-temperature area
4. Optional control panel with service lights and switches, with relay base assembled and wired to a terminal strip

Group B: Electric Pilot Ignition—for Natural or Propane Gas

1. RA890F electronic relay and base
2. Q179A electronic pilot
3. High-temperature flame rod and ignition wire (10 ft. of each) for use in the high-temperature area
4. Ignition transformer-6000 Volt
5. Pilot line solenoid valve
6. Optional control panel with service lights and switches, with the relay base assembled and wired to a terminal strip

Group C: Valves and Accessories for FIA Systems NATURAL GAS

Bryant P/N	Quantity	Gas Valve Body Size (Inches)	Gas Valve Operator		Gas Cock Size (inches)	System Vent Size (inches)	Vent Valves P/N	Gas Pressure Regulator Size (inches)
